Martin Brower - UX/UI Transformation (re-design)

About the Project

Martin Brower is a massive global supply chain and logistics provider that specializes in serving leading quick-service restaurant (QSR) chains, most notably being one of the primary and largest global distributors for McDonald's as well as brands like Subway, Chipotle, and Domino's.

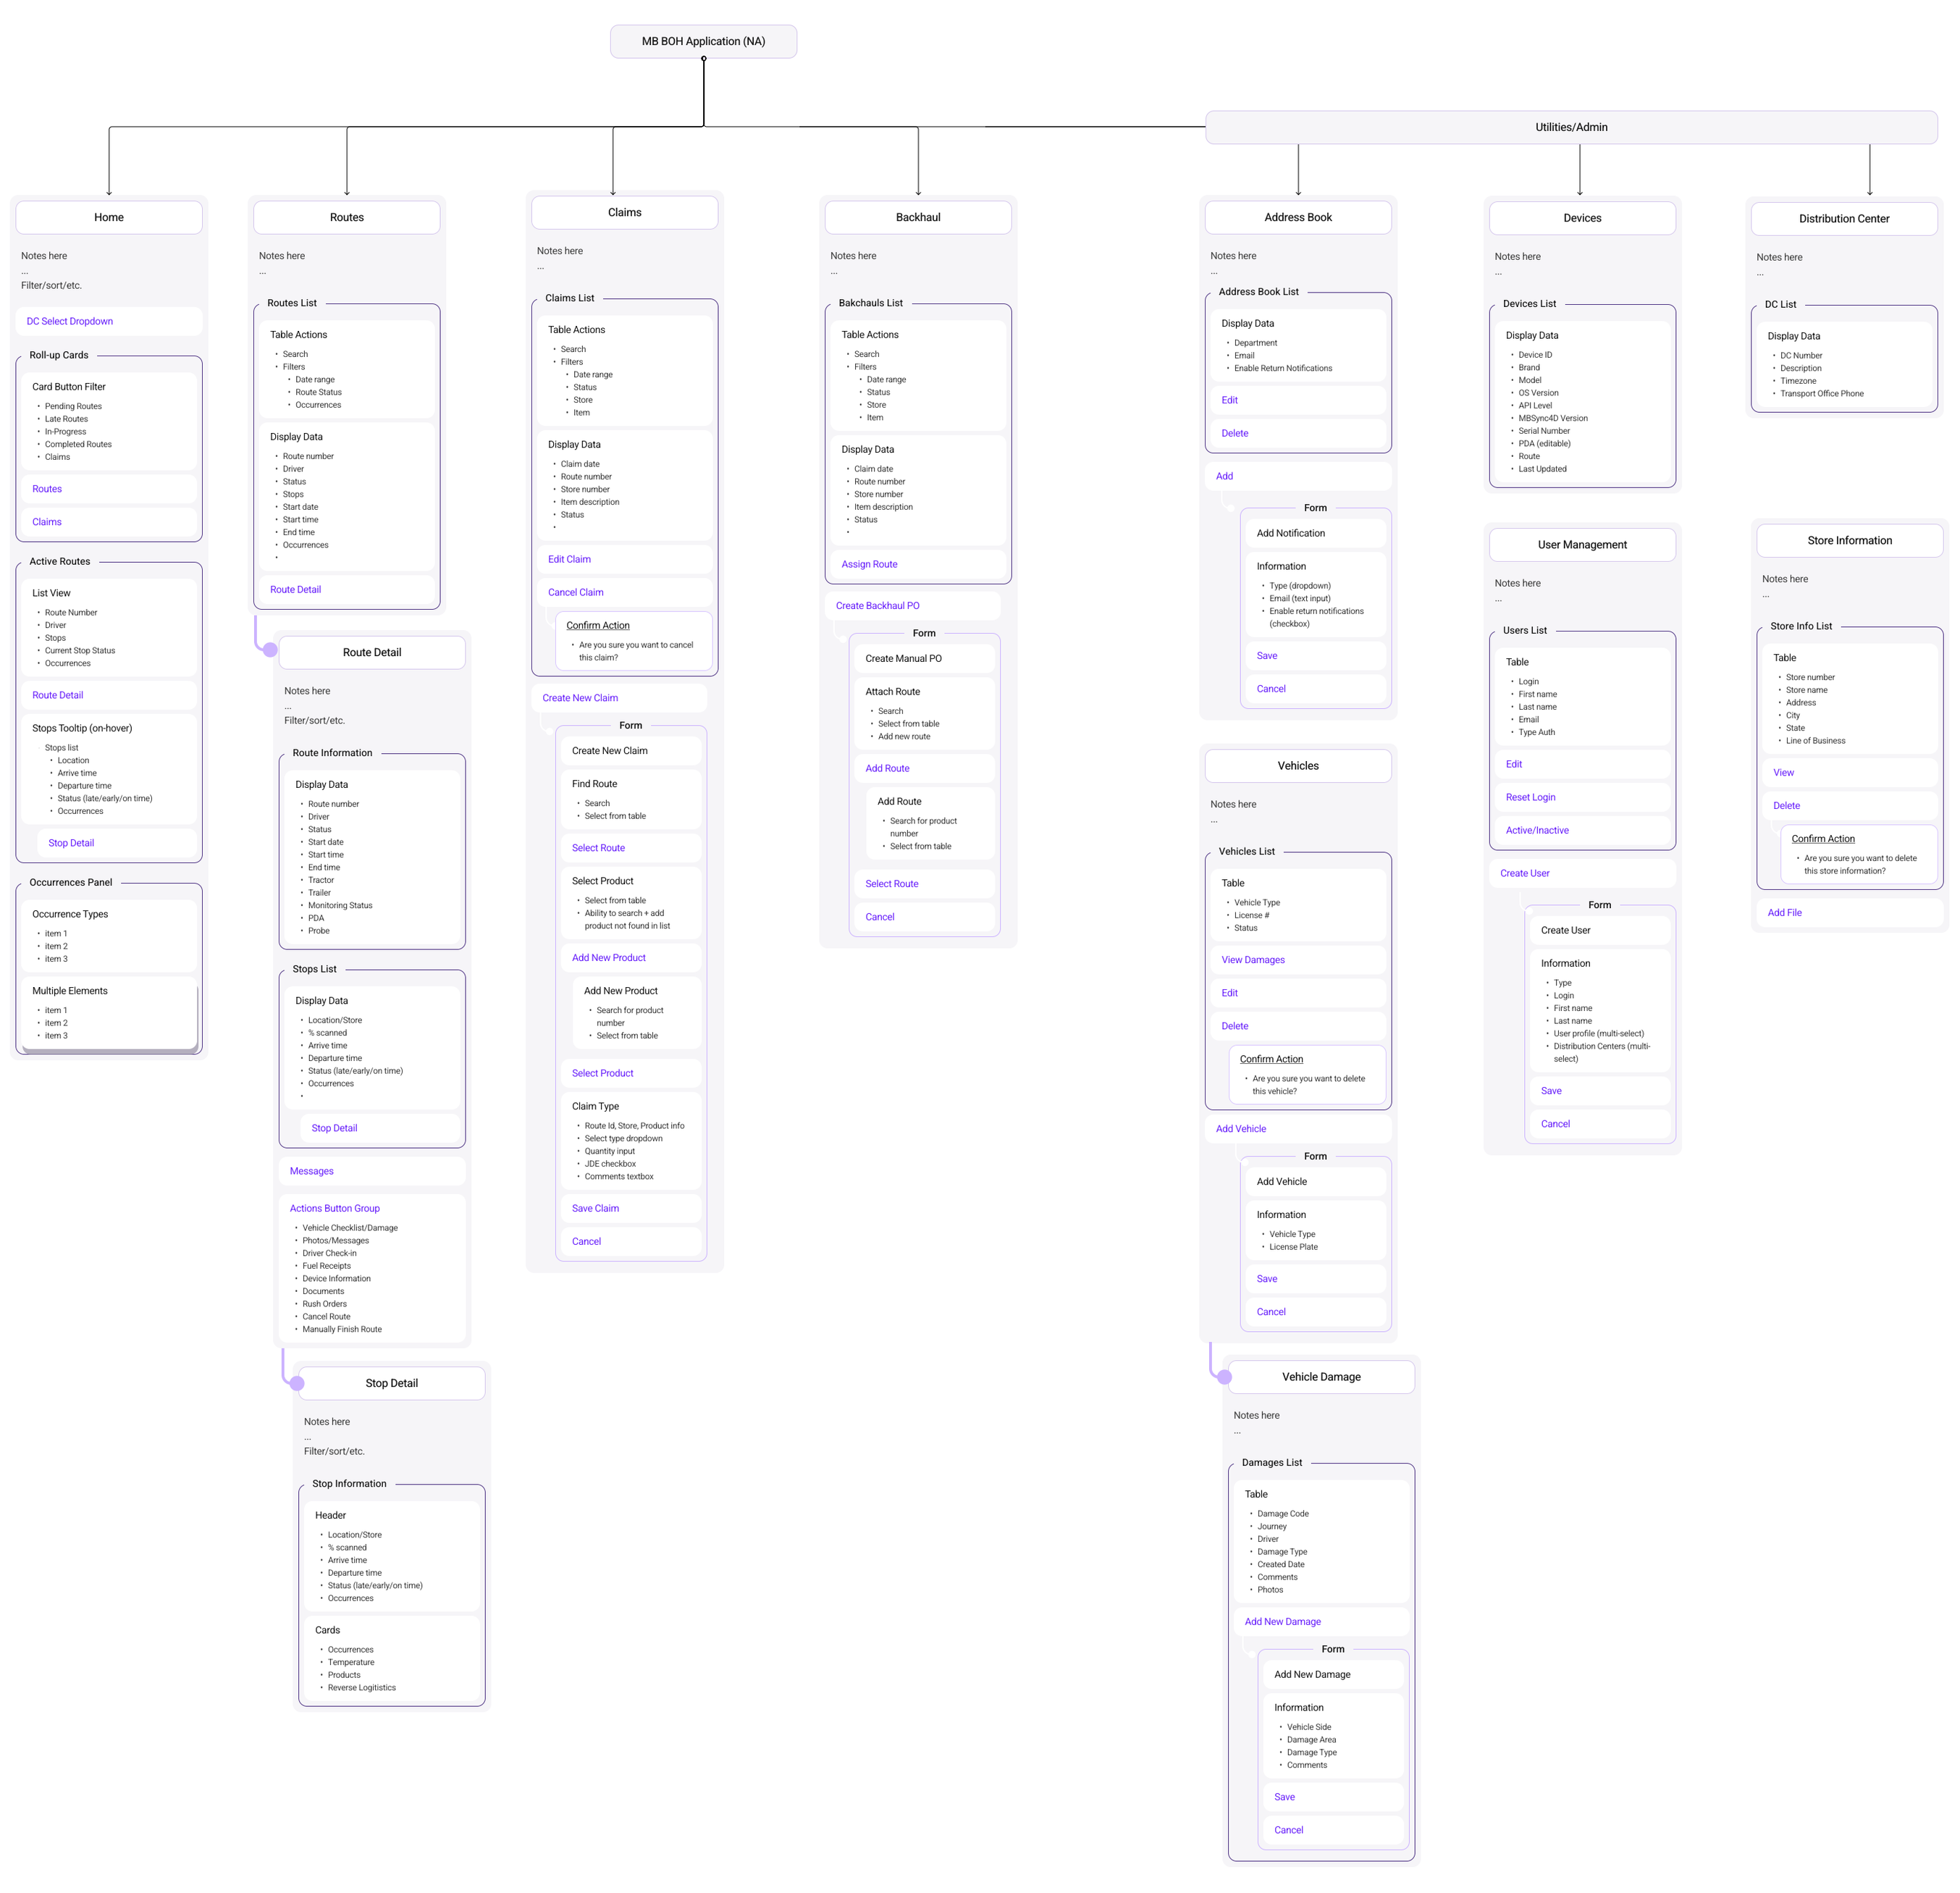
Client:	Location:	Role:
Martin Brower	USA	Lead UI/UX Designer

My approach and responsibilities included:

- **Website & Product Audit:**
  Evaluated the existing website and product experience to identify usability issues, design inconsistencies and improvement opportunities.
- **User Journeys & Information Architecture:**
  Defined user flows, simplified navigation and structured content around user needs and business objectives.
- **Admin Dashboard & Portal Design:**
  Designed user-friendly administrative interfaces to simplify workflows and improve operational efficiency.
- **Design System Development:**
  Established design foundations, reusable components and consistent UI patterns to ensure scalability across digital products.
- **AI-assisted Prototyping:**
  Leveraged Figma Make to create interactive, clickable prototypes, enabling early validation and presenting design concepts to product teams and stakeholders.
- **Developer Handoff:**
  Prepared detailed design specifications, component guidelines and interaction documentation to support smooth development and implementation.

Information Architecture & User Journeys

Developed the proposed information architecture (IA) and user flows based on research findings and the existing product assessment, organising content, navigation and key user journeys to create a more intuitive and seamless experience.



Final Deliverables

Old vs. New Design – UI/UX Improvements
A side-by-side comparison of the existing and redesigned interfaces, highlighting improvements in visual hierarchy, usability, navigation, consistency, accessibility, and overall user experience through established UI/UX design principles.

Figma File Organisation & Collaboration

Organised the Figma workspace into clearly defined pages and sections based on project requirements, ensuring designers, developers and stakeholders can easily navigate, review, collaborate and access design assets.

Established a collaborative handoff process using shared Figma files, with organised components, design specifications, prototypes and developer-ready documentation to support seamless implementation and ongoing team collaboration.

- Approved Designs for Dev Hand-off

Approved Design Files Following Stakeholder Review & Sign-off

Finalised and organised the design files after review, feedback and approval from the relevant stakeholders and approvers, ensuring the designs were ready for developer handoff and implementation.
